

GenAI for ArbitrageGainer model feedback

The changes I made to the team's pseudocode based on GenAI suggestions :

1. **Workflow Consistency:**

- Some workflows use "stop" while others have "Stop" (with uppercase "S"). I changed this to standardize the case usage throughout for consistency and readability.

2. **Types and Data Structures:**

- There are some inconsistencies in data types. For instance, in the **CheckOrderStatus** workflow, **Order** was defined as a tuple with two strings (SellOrderStatus, BuyOrderStatus), while elsewhere **Order** referred to another structure. I changed the naming for better clarity.
- I changed **NotificationInfo** to **Notification**.

3. **Clarifying the Workflow Purpose:**

- I added a brief comment at the start of each workflow to describe its purpose.
