

The feedback provided by our genAIs are basically identical.

genAI provided us feedback that we miss workflow for retrieving order status, but we have the workflow for the fully fulfilled, partially fulfilled and one side filled order status separately. The “Start Trading” workflow tracks the fully fulfilled, and “Continue Partially Fulfilled Order” track partially fulfilled status and “Notify User When One Side of an Order Filled” track the one side filled status. Therefore, we think genAI provided us with unhelpful feedback for this case, and we don’t need additional workflow to retrieve the status.

The genAI indicates we miss critical details for some workflow, like “Get Historical Arbitrage Opportunities”. So I added the input which is Request to calculate historical arbitrage opportunities for this workflow. In addition, genAI also provided us with unclear stop conditions for workflow, so I added the stop conditions for the “Request cross-trading crypto info” and “Start Trading” workflow.
